(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat; streptococcal sore throat not reportable in New Brunswick and Quebec. (6) Type not specified. (7) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 19 (11); Measles 19,729(20,794); Meningitis, other 28 (25); Poliomyelitis, with paralysis 17 (12); Smallpox - (-); Undulant fever 20 (21); Encephalitis infectious 31 (31); Meningococcal infections 68(43); Poliomyelitis, acute 48 (32); Poliomyelitis, without paralysis 24 (17); Typhoid fever 19 (12);

Thus far in 1957 the reported incidence of poliomyelitis has been about one-half of that for the same period of 1956. The number of paralytic cases has been about half of that for last year. In about half of the states, the number of cases reported since January 1 have been substantially below (50 per cent or more) the numbers for last year. In about one-fourth of the states, there have been increases as compared with 1956, some of which amounted to 100 per cent or more. However, several of these are based on a small number of cases and, as a consequence, may not be considered significant.
