(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat. (6) Nova Scotia reports cases of tuberculosis monthly (weekly figures are preliminary); for this disease the 1958 cumulative totals for Canada include cases for Nova Scotia up to the end of the previous calendar month. (7) Type not specified. (8) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable. (9) Reports for the Province of Quebec not available since November 1. (10) Report not received.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria	23 (31)	Measles	4,180 (4,885)	Meningitis, other	38 (65)	Poliomyelitis, with paralysis	37 (43)	Typhoid fever	13 (19)
Encephalitis, infectious	16 (22)	Meningococcal infections	43 (43)	Poliomyelitis, acute	58 (74)	Poliomyelitis, without paralysis	10 (20)	Undulant fever	5 (7)

The cumulative 1958 figure for poliomyelitis totals 5,995 reported cases. Of these, 3,083 (51 per cent) were paralytic and 2,018 (34 per cent) nonparalytic. In 1957 the provisional figures were 5,894 total cases, 2,159 (37 per cent) paralytic and 2,802 (48 per cent) nonparalytic cases. The relatively high percentage of paralytic cases this year is no doubt due to more accurate diagnoses before the report is made and a reluctance to report nonparalytic disease without laboratory confirmation.

*NEWFOUNDLAND reports Measles (epidemic) at Pushthrough, Fortune Bay and Hermitage District.
