(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat; streptococcal sore throat not reportable in New Brunswick and Quebec. (6) Type not specified. (7) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable. (8) Report not received.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 33 (24); Measles 4,510 (3,927); Meningitis, other 26 (23); Poliomyelitis, with paralysis 58 (33); Smallpox - (-); Undulant fever 16 (19); Encephalitis infectious 22 (16); Meningococcal infections 43 (43); Poliomyelitis, acute 102 (66); Poliomyelitis, without paralysis 30 (16); Typhoid fever 12 (15);

After a temporary rise in incidence of diphtheria which began in the latter half of 1955 and extended into the first half of 1956, the number of reported cases began to decline. The 1956 total is slightly more than 20 per cent below the total for 1955, and the total for the last half of 1956 is about 40 per cent under that for the same period of the previous year. However, several states reported more cases in 1956 than in 1955, and some localized outbreaks continued to occur.

The number of reported cases of infectious encephalitis in 1956 was about 50 per cent in excess of that for 1955.

There was an increase in incidence of typhoid fever in 1956. Thirty states reported more cases than in 1955.

EPIDEMIC REPORTS: Measles - Nfld. reports epidemic at Ferryland.
