(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat; streptococcal sore throat not reportable in New Brunswick and Quebec. (6) Type not specified. (7) Includes chancre, granuloma inguinale and lymphogranuloma venereum. .. Not reportable.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 13 (23); Measles 18,544 (16,648); Meningitis, other 32 (51); Poliomyelitis, with paralysis 15 (14); Smallpox - (-); Undulant fever 12 (20); Encephalitis infectious 21 (27); Meningococcal infections 65 (54); Poliomyelitis, acute 30 (37); Poliomyelitis, without paralysis 12 (14); Typhoid fever 16 (27);

The number of reported cases of measles for the country as a whole exceeds that of 1956 by less than 10 per cent. Although the peak incidence of measles usually occurs sometime in April, indications are that the peak has been reached in a number of states. The Hawaii Department of Health has reported the highest incidence in the Territory for January since 1952, when 3,441 cases were reported during the first month. The number for January 1957, was 1,887. Since the first week in January, when 456 cases (319 in Oahu) were reported, there has been a decrease in incidence. For the current week 291 cases were reported in Hawaii.
