(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat; streptococcal sore throat not reportable in New Brunswick and Quebec. (6) Type not specified. (7) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable. (8) British Columbia reports 76,072 cases of influenza for the previous week.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 46 (46); Measles 2,237 (1,718); Meningitis, other 40 (54); Poliomyelitis, with paralysis 43 (27); Smallpox - (-); Undulant fever 8 (13); Encephalitis infectious 21 (28); Meningococcal infections 85 (71); Poliomyelitis, acute 59 (46); Poliomyelitis, without paralysis 10 (8); Typhoid fever 20 (26);

There was a marked reduction in the number of reported cases of influenza and influenza-like disease in many states for the week ended November 23 and estimates of incidence in some others were much below those for previous weeks. On the basis of various types of reports from 33 states, the total for the week is estimated to be 450,000. There were numerous statements that there was a statewide decline, that no new communitywide outbreaks had occurred, or that absenteeism in schools was returning to or had reached normal levels. A few reports stated that a larger proportion of cases seemed to be occurring in adults. However, no increase in industrial absenteeism was reported.

*NEWFOUNDLAND reports Influenza (epidemic) at Cox's Cove and North Side of Number Arm; Catalina and vicinity.

**NEWFOUNDLAND reports Mumps (epidemic) at Little Catalina, P.B.
