(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat. (6) Nova Scotia reports cases of tuberculosis monthly (weekly figures are preliminary); for this disease the 1958 cumulative totals for Canada include cases for Nova Scotia up to the end of the previous calendar month. (7) Type not specified. (8) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 12 (39); Measles 1,533 (1,208); Meningitis, other 80 (199); Poliomyelitis, with paralysis 152 (131); Typhoid fever 22 (37);
Encephalitis, infectious 55 (65); Meningococcal infections 43 (52); Poliomyelitis, acute 311 (313); Poliomyelitis, without paralysis 116 (122); Undulant fever 16 (19);

The number of reported cases of poliomyelitis for the week ended October 11 is 311. Of these, 152 cases were paralytic and 116 nonparalytic. For the week ended October 12, 1957, there were 167 total cases reported with 88 of these paralytic and 63 nonparalytic. Reports from 2 States have not been received. The numbers of total cases and paralytic cases reported from most of the geographic divisions for the current week remained about the same as or less than those for the previous week. But the West North Central and South Atlantic Divisions each reported a sizable increase and the number of paralytic cases in the Middle Atlantic Division is about double that for the previous week. The total figure for the East North Central Division is less than that for the previous week but the number of paralytic cases is slightly higher. The decrease in the total for this division is largely due to the lower number of cases reported in Ohio. Michigan reported about the same number for each category as last week. Fifty-three of the 98 cases reported in Michigan for the current week had onset in the week ended October 3; 28 had onset in the week ended September 26.

*NEWFOUNDLAND reports Chickenpox (epidemic) at St. Mary's and Aquaforte, Ferryland District. **NEWFOUNDLAND reports Measles (epidemic) at Bay Roberts, C.B.
