THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 28 (41); Measles 2,936 (2,444); Meningitis, other 123 (92); Poliomyelitis, with paralysis 106 (95); Typhoid fever 22 (20); Encephalitis, infectious 58 (29); Meningococcal infections 46 (32); Poliomyelitis, acute 162 (156); Poliomyelitis, without paralysis 37 (33); Undulant fever 7 (15);

The number of cases of poliomyelitis reported for the current week is 162 of which 106 were paralytic and 37 nonparalytic. This is an increase over the revised number reported the previous week (156 total cases including 95 paralytic and 33 nonparalytic). The 106 paralytic cases this week is almost 4 times the 27 cases reported the week ended November 16, 1957, but somewhat less than the 117 paralytic cases reported for the comparable week in 1956. Texas and California were the only States which reported more than 9 paralytic cases for the current week; Texas had 19 and California 11. Only 1 paralytic case was reported in the New England States and 1 in the Mountain States.
