(1) Figures adjusted for delayed reports. (2) Exclusive of Yukon and Northwest Territories. (3) Total accumulated to the end of the current week from the first week ending in January of the year stated. (4) Includes cases where type was not specified. (5) Scarlet fever includes cases of streptococcal sore throat. (6) Nova Scotia reports cases of tuberculosis monthly (weekly figures are preliminary); for this disease the 1958 cumulative totals for Canada include cases for Nova Scotia up to the end of the previous calendar month. (7) Type not specified. (8) Includes chancroid, granuloma inguinale and lymphogranuloma venereum. .. Not reportable. (9) Report for the Province of Quebec temporarily unavailable since November 1.

THE SITUATION IN THE UNITED STATES (Source: "MORBIDITY AND MORTALITY-WEEKLY REPORT", U.S. National Office of Vital Statistics): Number of reported cases for the current week (previous week in parentheses):

Diphtheria 32 (47); Measles 3,718 (3,654); Meningitis, other 86 (88); Poliomyelitis, with paralysis 69 (85); Typhoid fever 15 (28);
Encephalitis, infectious 33 (43); Meningococcal infections 45 (48); Poliomyelitis, acute 119 (134); Poliomyelitis, without paralysis 28 (24); Undulant fever 13 (9);

The incidence of poliomyelitis is continuing to decrease steadily. The 119 total cases reported for the current week is the lowest figure since early July, and the 69 paralytic cases is the lowest number since the week ended August 2 when also 69 cases were reported. A brief summary of the cumulative figures for paralytic cases so far this year shows that almost 30 per cent of the total was reported in Michigan and Texas with 473 and 387 cases respectively. When the figures for California, 234, and New York State, including New York City, 173, are added, the sum amounts to 44 per cent of the total cases. For 2 States, New Hampshire and Idaho, no cases have been recorded. Ten other States and the District of Columbia have reported 5 or less paralytic cases.

YUKON TERRITORY: Number of cases four weeks ended November 29: influenza, epidemic, 4; mumps, 2; tuberculosis, pulmonary, 6; hepatitis, infectious, 2; gonorrhoea, 14.

ANTHRAX: One case reported in Saskatchewan.
